Languages
Turkish — Native
English — Advanced
French & German — Basic

CRM & Revenue Analytics-focused Industrial Engineer with experience in retention modeling, KPI design, segmentation, and store-level performance optimization across Nike and Nesine. Strong in translating data into measurable commercial decisions and lifecycle optimization.

EXPERIENCE

NIKE I Logistics Analyst — 2025 – present

- Track and report on inventory and financial KPIs across 61 retail doors; support business decisions on stock positioning and partner performance.
- Built and maintain an allowance tracking dashboard to monitor partner return limits and financial exposure.
- Execute SAP-based stock adjustments and order corrections to ensure data integrity and operational transparency.

NESINE I CRM Intern — 2024

- Conducted retention, churn, and cohort analysis to support lifecycle strategy for a high-frequency user engagement platform.
- Designed and executed segmentation-based campaigns using behavioral data; improved engagement ~20% for targeted user cohorts.
- Built revenue forecasting models to guide budget allocation; monitored CRM KPIs and translated findings into actionable growth recommendations.
- Contributed to the launch of atyarisi.com using SQL and Tableau; the new branch grew market share by +150% in its initial phase.

NIKE I Retail Sales Intern — 2023 – 2024

- Conducted store-level KPI analysis (conversion, margin, sell-through, stock coverage) across 54 retail doors to identify revenue risks and performance gaps.
- Built Excel–Tableau reporting infrastructure to standardize KPI visibility and accelerate commercial decision cycles.
- Flagged underperforming categories; collaborated with merchandising on product-level optimization and supported new retail store openings.

KPMG I Data & Digital Advisory Trainee — 2022 – 2023

- Acted as Scrum Master on a data transformation project for an Iraqi telecom company; coordinated sprint planning and cross-functional delivery.
- Contributed to an internal project predicting customer reactions using generative AI techniques.
- Built a Python-based PDF parser to detect anomalies in vendor contracts, streamlining procurement review.

PROJECTS

Birader I Full-Stack Social Logging Platform — 2026

www.birader.app

- Built and deployed a full-stack beer check-in social platform (Next.js, React, TypeScript, Tailwind, Supabase) with public profiles, social feed, follows, comments, notifications, and activity heatmaps. Includes PWA support, TR/EN localization, row-level SQL security, and an Expo React Native mobile MVP.
